

Interface overview

Settings: Configuring the Working Folder

The screenshot shows the TALL application's settings window. The left sidebar has a 'Settings' menu item. The main area is titled 'Settings' and contains the instruction 'Select a folder where the analysis outputs will be saved'. Below this are two buttons: 'Select a Working Folder' (highlighted with a yellow star and a mouse cursor) and 'Clean temporary folder'. A text box explains that upon first launch, users must set a directory for storing outputs, which can be changed later. A file selection dialog is shown, displaying a list of directories under 'home', with 'Documents' selected. A green callout box states that all settings are saved and applied in future sessions.

Settings

Select a folder where the analysis outputs will be saved

Select a Working Folder

Clean temporary folder

Upon the first launch, users must set a directory for storing outputs. This can be changed later in the settings

All settings are saved and automatically applied in future sessions

This ensures efficient file organization and easy access to results!

TALL buttons

PLAY

Start the process and execute the analyses

SETTINGS

A list of options for setting analysis parameters

EXPORT

Download the graphs or export data in Excel

DOWNLOAD

Export analyzed data in TALL as a .tall file format

ADD TO REPORT

Save analysis results to a report

RESTORE

Revert to the original data, restoring the initial object
